PROFESSIONAL SUMMARY

Senior Technical Writer and Documentation Architect with 8 years of experience building high-velocity content ecosystems for enterprise cloud platforms. Excels at defining content architecture standards and translating complex technical ambiguity into actionable, structured patterns for developers and AI systems. Specialist in structured content modernization, information architecture, and content engineering to scale foundational documentation strategy.

CORE COMPETENCIES & TECHNICAL STACK

- **Methodologies & Strategy:** Information Architecture (IA), Product Content Design, Docs-as-Code, Docs-as-Product, User Experience (UX) Strategy, Jobs-to-be-Done (JTBD), Agile
- **Technical Domains & Systems:** Cloud Architecture (AWS), Containerization & Orchestration (Kubernetes), Infrastructure as Code (IaC), Platform Engineering, REST APIs & Developer Experience (DevEx)
- **Documentation Formats & Systems:** AsciiDoc, Markdown / MDX, DITA / DocBook XML, Structured Content Schemas (JSON/YAML), Content Reuse, Taxonomies
- **Tooling & Content Engineering:** Git/GitHub/GitLab, CI/CD Pipelines, Python Scripting, Frontend Frameworks (React, Node.js), Agentic Workflows (OpenCode, Claude, Cline)

PROFESSIONAL EXPERIENCE

Cloudflare | Senior Technical Writer Feb 2026 – May 2026

- Architected the foundational information architecture (IA) and content model for a new solution guide ecosystem, defining the standardized design patterns and self-service governance required to scale high-quality, repeatable delivery across global teams.
- Collaborated with UX content strategists to influence site structure and navigation, mapping disparate cloud services into cohesive Zero Trust and Application Security customer workflows.
- Engineered a custom agentic workflow using OpenCode and Python to automate cross-product discovery and drafting; utilized non-deterministic logic to systematize complex research and deliver validated drafts, compressing production cycles from days to hours.

Amazon Web Services (AWS) | Technical Writer | Systems Strategist Apr 2022 – Jan 2026

- Defined the content ecosystem strategy as the founding lead writer for ROSA and Amazon EVS, owning end-to-end documentation architecture for both services and driving EVS launch readiness from private preview through General Availability (GA).
- Architected a multi-year XML-to-AsciiDoc modernization program, engineering an AI-assisted Python migration toolkit to standardize content across standard, regulated, and air-gapped regions.
- Scaled the structured content framework from an initial ROSA pilot to an org-wide standard adopted by EKS and SAP, establishing self-service documentation pathways that increased non-writer contributions by 25%.
- Drove broad organizational adoption of the self-service documentation model by authoring the "Documentation Ownership Runbook," delivering tooling demos, and co-hosting office hours to enable engineering teams to take governed ownership of content via Git-based workflows.

- Executed a Jobs-to-be-Done (JTBD) content redesign for ROSA, restructuring the information architecture, consolidating redundant deployment guides, and aligning page taxonomy with customer goals to reduce support ticket volume.
- Institutionalized a data-driven feedback loop by synthesizing formal support tickets and continuous syncs with Product & Engineering (P&E) and Solution Architects (SAs); identified critical product defects via VP-level Strategic Business Reviews (SBRs), driving immediate engineering fixes and improving enterprise customer retention.
- Pioneered a secure delivery portal for private-preview documentation, engineering a custom CI/CD pipeline (React, Vite, AWS Amplify) to accelerate product evaluation; secured AppSec approval for the underlying architecture as a secure baseline for future pre-release deployments.

Pluralsight (A Cloud Guru) | Technical Writer Sep 2020 – Apr 2022

- Architected hands-on learning experiences for cloud and DevOps practitioners, delivering an extensive library of labs covering AWS, Azure, GCP, and Kubernetes.
- Simplified complex architectures into scaffolded, task-based modules to accelerate learner time-to-proficiency.

Cody Anthony Technical Writing Services | Technical Writing Consultant Jan 2018 – Sep 2020

- Advised high-growth SaaS firms on information architecture and lifecycle processes to improve discoverability and reduce support burden.
- Transformed tribal knowledge into structured, scalable documentation systems for startups and small businesses across the SaaS, eCommerce, and private equity sectors.

EDUCATION

- **B.A., English (cum laude)** | Truman State University
- **Content Strategy Specialization** | Northwestern University
- **Programming and Development (Python, Java)** | Eastern Gateway Community College
